Laval University, Quebec, Canada
2012 – 2015

DCS in Computer Science

Cégep de Sainte-Foy, Quebec, Canada
2010 – 2012

SUMMARY

Senior full-stack developer and product manager with 9+ years across AI, fintech, and SaaS, shipping high-performance web products for North American startups and enterprises, most recently ComfyUI, the \$500M-valuation open-source generative AI platform. Specializes in Next.js, React, TypeScript, and Node.js, pairing an AI-augmented development workflow with rigorous engineering discipline and a product management background. Bilingual, English and French.

WORK EXPERIENCE

Senior Front-End Developer

2026

ComfyUI [Contract via Toptal](#)

- Designed a Claude Code chat workflow for Comfy Org, the \$500M-valuation San Francisco startup behind ComfyUI: anyone on the team creates a production page through chat alone, no code and no UI, with Vercel preview URLs and an approval workflow gating the merge to production.
- Integrated PayloadCMS as the structural backbone of that workflow: chat-created pages assemble existing, structured content blocks instead of generating one-off code, keeping the site's architecture consistent and letting marketing update pages without engineering.
- Built and maintained features in ComfyUI's complex, high-performance web application, a platform with 4M+ users, 150K+ daily downloads, and an ecosystem of 60K+ community-built nodes.

Tech: Vue 3, Astro, PayloadCMS, TypeScript, CodeRabbit, Tailwind CSS, CustomerIO, Supabase, PostgreSQL, GCP

Senior Full-Stack Developer

2026

Afi Expertise [Client of Concreo](#)

- Architected and rebuilt afiexpertise.com from scratch with Next.js, Sanity, and Tailwind CSS for a bilingual (FR/EN) corporate training company.
- Integrated the Administrate training management system to power a 360+ course catalog with faceted filtering by faculty, subject, and certification.
- Built in-app course checkout with Stripe, turning the site from a brochure into a transactional platform.
- Modernized the CMS by migrating content into Sanity, enabling the content team to self-serve in both languages.
- Preserved and improved SEO through the migration while leaving a markedly more maintainable codebase.

Tech: Next.js, React, TypeScript, Sanity, Tailwind CSS, Stripe, Administrate, HubSpot

Senior Full-Stack Developer & Product Manager

2024 – 2026

TakeUp [Contract via Toptal](#)

- Rebuilt the web application from the ground up, migrating a live product with a paying customer base from Bubble.io to Next.js with zero downtime.
- Sole developer of the web application over the 18-month engagement, acting as de facto product manager: decided which features to build, owned the architecture, and shipped from spec to production on an AI pricing platform managing live room rates for hotels, boutique hotels, and B&Bs.
- Designed and built the pricing workflows operators use to preview, edit, and approve AI-driven rate recommendations, in Next.js, React, shadcn/ui, and Server Actions.
- Connected the front end to Python and FastAPI services running pricing logic and AI inference, owning the latency and error-handling story across the boundary.
- Wired organization-based authentication with Clerk for multi-property access patterns.

Tech: React, Next.js, TypeScript, Highcharts, Clerk, Node.js, CSS

Founder & Senior Product Manager

2020 – Present

Concreo Solutions Inc.

- Founded and run a product engineering consultancy, delivering six client engagements (marked "Client of Concreo" below) end to end across ed-tech, HR-tech, food delivery, and creative industries, from scoping and architecture through production launch and post-launch support.
- Shipped every engagement to production with a maintainable handoff; two clients converted to ongoing retainers, and clients repeatedly extend engagements or return with new projects.

Tech: React, Vue, Nuxt.js, Next.js, Svelte, Firebase, Tailwind CSS, PostgreSQL, MySQL, Laravel, AWS Amplify, GCP, Vercel

Senior Full-Stack Developer

2024 – Present

Humanly [Client of Concreo](#)

- Own the marketing website of Humanly, an AI hiring platform, end to end; engaged directly after Humanly acquired Teamable, a previous client.
- Built the multi-page site in Next.js, Sanity, Tailwind CSS, and shadcn/ui, with a reusable component layer that shortened time-to-feature and a content model non-technical teammates ship with, no engineering required.
- Delivered polished, animated, WCAG-accessible experiences across desktop, tablet, and mobile.

Tech: Next.js, React, Sanity Studio, Tailwind CSS, Shadcn, Resend

Full-Stack & 3D Developer

2022 – 2024

Wearesky [Client of Concreo](#)

- Designed and built a 3D-centric web experience with Nuxt.js, Three.js, and GSAP that became the brand's primary visual differentiator.
- Optimized heavy 3D assets to render smoothly across devices, increasing mobile interactions, and built a reusable Vue component library for 3D-driven layouts.

Tech: Vue 3, Nuxt.js, Three.js, GSAP, Tailwind CSS, Contentful, Google Analytics 4

Front-End Developer

2022 – 2024

Teamable *Client of Concreo*

- Designed and shipped Teamable.com's UI in Next.js and Tailwind CSS for the venture-backed, San Francisco-based hiring platform, with WCAG-compliant accessibility and responsive performance.
- Teamable was acquired by Humanly in 2024, which then engaged me directly for its own site.

Tech: Next.js, React, Tailwind CSS, Google Analytics 4

Front-End Developer

2021 – 2022

Grics *Client of Concreo*

- Built the reusable component suite for an internal admin dashboard that became the team's component reference.
- Hardened quality with Jest test suites and Storybook documentation used by developers and stakeholders alike.

Tech: Vue 3, Nuxt.js, Vuetify, Jest, Storybook, Azure DevOps

Full-Stack Developer

2020 – 2021

Takeln *Client of Concreo*

- Built the back end handling concurrent food orders at scale, including secure Stripe payment integration.
- Refactored core user and order code paths, measurably improving performance and maintainability.

Tech: Nuxt.js, Vue, Firebase, Stripe, Node.js, TypeScript, Docker

Product Owner & Front-End Developer

2020 – 2021

Zumrails

- Joined Zumrails at its founding stage, shaping the initial product mockups and marketing proposal that defined its fintech payments platform.
- Zumrails went on to raise a Series A at a \$100M+ valuation (2024).

Tech: Vue 3, Nuxt.js, Tailwind CSS, Figma, i18n

Product Owner

2019

Flinks

- Owned the Wealth Data product, expanding Flinks' data coverage from banking to investment and wealth accounts, and built the product-led growth initiative: a platform letting customers self-onboard without talking to a sales rep.
- Drove product vision, roadmap, release planning, and user story elaboration across both initiatives.
- Flinks was acquired by National Bank of Canada for \$100M (2021).

Tech: Aha!, Figma, Research, Bootstrap

Business Intelligence Consultant

2017 – 2019

CGI

- Built reporting and forecasting dashboards in Tableau and Power BI for enterprise clients, including a major Canadian bank, that became the source of truth for executive KPI monitoring.
- Designed scenario and sensitivity models to predict financial outcomes and pressure-test strategic initiatives.

Tech: Tableau, Power BI, Microsoft Dynamics CRM, SQL
